

Orasi Analytics & Alteryx— Solving the Data Conundrum, Together

Data Analytics: Unlock the Data

You have multiple data sources, in different formats and sizes. It used to take weeks or months to cleanse, prepare and join data so you could apply the necessary models and finally share the results with your business stakeholders. You chose Alteryx to take the process from weeks and months to minutes. However, even with the sophisticated workflows and models, you are unable to answer the most basic question, “Why?”

Answering the “Why”—It’s What We Do

Our experienced team of certified Alteryx consultants are not only technically proficient with the Alteryx platform; they immerse themselves in your data. This approach allows us to move beyond focusing on the technology improvements in the platform. More importantly, we come to understand your data as well as (or better than) your stakeholders. So, when all the workflows and models are complete, we are uniquely positioned to work with your stakeholders to answer the Why? Questions that, despite your extensive exploration of the issue, you still cannot answer.

Onshore Consulting Services Designed Around You

No single outsourcing model is right for every company: some need personnel on-site, some need a larger staff but do not have facilities to house them, and still others are more concerned with cost. In response to these varied requirements, Orasi provides a U.S.-based analytics services model that includes:

- On-site analytics consultants
- Onshore analytics consultants

Through its U.S.-based services model, Orasi can optimize the mix of personnel and services for your Alteryx-powered projects while keeping expenses within the client’s budget allocations.

“

Our experts will come to your premises and engage with your team, helping them identify use cases, develop plans, and find constructive solutions to their analytics challenges.

”

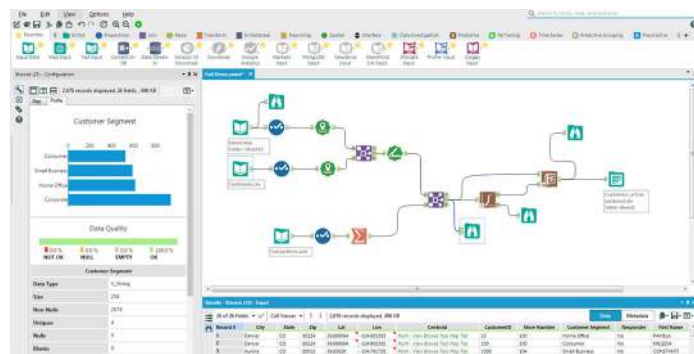

Maximize your investment in Alteryx to jump-start your deployment and get your analysts up to speed quickly. Harness the full value of the Alteryx platform and its sophisticated capabilities so you can gain richer insights and answer the “Why?”.

Are you ready to reap the value of self-service visual analytics and watch users enthusiastically embrace it across your company? Let Orasi's expertise with the world's most powerful analytics platform help you develop a foundation and foster a culture that smooths the way to analytics adoption. Our experts will come to your premises and engage with your team, helping them identify use cases, develop plans, and find constructive solutions to their analytics challenges.

For companies seeking to fast track their introduction to data analytics—or to demonstrate value to reluctant stakeholders—Orasi offers its Quick Start Program. In just five days, Orasi experts coach your team to identify a real-world use case for one of your firm's data analytics challenges and then lead a heads-down session to develop analytical solutions that drive meaningful, actionable insight.

As adoption of the cloud literally skyrockets, business leaders are recognizing its benefits for analyzing data. Widely recognized as the most practical approach for analytics, the cloud eliminates the need for firms to deploy and maintain servers—and removes processing constraints that hamper on-premise analytics deployments.

To provide the scalability, security and data redundancy that best practices dictate, Orasi offers analytics as a service for the entire data analytics pipeline. Our rigorously trained and certified IT professionals put analytics to work for your business with no drain on your time or resources.

Our Alteryx-certified professionals will help your organization get off the ground and running with hands-on training sessions. We'll introduce your team to the powerful, built-in Alteryx toolset that enables teams to connect, blend, cleanse, and format data for a faster time to insight.

Statistics indicate that 80 percent of many data analysts' time is spent prepping and blending data—often with Excel spreadsheets—but that doesn't have to be the case for your firm. Orasi's certified Alteryx consultants automate labor-intensive ETL processes. Free your analysts from the error-prone tedium of prepping and blending data so they can focus on producing valuable insight for your business stakeholders.

Reaping full value from Alteryx requires more than teaching analysts to use it. The rest of the organization must be on board and up to speed, as well. An Alteryx Workshop is a multiday, high-level event, led by one of our Alteryx-certified professionals, where your entire team learns how to identify specific use cases and develop mature workflows.
