

Why is maintaining your Tableau Server critical to the overall success of your analytics strategy?

Often companies lack the expertise or resources to properly maintain the analytic platforms in which they have heavily invested. This results in security risks, performance issues, platform instability and ultimately platform abandonment.

Orasi solves this problem by offering managed services which ensure that your platform is up to date, backed up, secure and performing at its peak in both on prem and cloud environments, yours or ours.

Orasi's Tableau Server Services

Installation/Configuration

- Installing/upgrading most recent version of server
